

## Signs and Symptoms of COVID-19

Know First to Act Fast

Recognize these symptoms of COVID-19 to ensure early start of treatment and care. The pre-symptomatic stage, when no symptoms appear, may range from 2 to 14 days after exposure to the coronavirus. It is also possible that you may have the coronavirus and remain asymptomatic.

Other less common symptoms such as nausea, vomiting, diarrhoea and "pink eye" may also occur. The severity of COVID-19 symptoms can range from very mild to severe. People who are older or who have pre-existing medical conditions, such as heart disease, lung disease, diabetes, obesity, kidney or liver disease, or who have compromised immune systems, are at higher risk of severe illness.
